Subject: Longer First Stage Easel for Prototype
Two Stage Rectifier

Dear Bill:

It was mentioned a while back that the persons using the prototype two stage rectifier in Omaha were interested in obtaining a first stage easel of the same length as those being used in the Washington area. Not being familiar with the procedure in contacting the appropriate people, I would appreciate your passing this information on. The cost for the new easel is [REDACTED] and this includes shipment of the easel and installation at destination by [REDACTED] representatives. Delivery and installation can be completed within 10 weeks after approval to proceed.

If additional data is required, please do not hesitate to contact me.

Very truly yours,

[REDACTED]

Instruments Sales

[REDACTED]:BBV

The first instrument installed by [REDACTED] at SAC (Omaha) is the only one with the "short" easel.
